Data Validation Tool - User Guide

Emma Coding Sheet Reference Checker

Overview

This tool validates appended data against the Emma Coding Sheet reference to identify any mismatched information based on site-acronym matching.

Step-by-Step Instructions

1. Prepare Your Reference Sheet

- Download the reference sheet from either:
  - Emma Coding Sheet, OR
  - Campaign Matrix
- Delete extra fields that are typically not appended:
  - Epic Code
  - First Foundation field
  - Any other fields not used in your append process
- Save the cleaned reference sheet as CSV or Excel

2. Upload Your Files

- Upload your appended data file (CSV or Excel)
- Upload your cleaned Emma Coding Sheet reference file
- Both files must have a 'siteacronym' or 'acronym' column

3. Configure Validation Settings

- The following fields are ignored by default:
  - con-id
  - hyc id
  - first_name
  - last_name
  - email address
- Uncheck any fields you want to include in validation

4. Run Validation

- Click 'Run Validation Check' button
- Review the validation summary showing:
  - Total records processed
  - Number of correct records
  - Number of incorrect records
  - Fields compared and ignored

5. Download Results

Choose your preferred download format:

- Download Correct Records (CSV) - All records that match the reference
- Download Incorrect Records (CSV) - All records with mismatches
- Download Both Sheets (Excel) - Single file with two tabs

Key Features

✓ Visual highlighting of mismatched fields in red
✓ Incorrect records include a 'MISMATCHED_FIELDS' column listing all discrepancies
✓ All processing happens locally in your browser - no data is uploaded to servers
✓ Supports both CSV and Excel file formats
