# Beginner Guide: HYC Midlevel Lapsed File Prep Tool

**1. WHAT IS THIS TOOL FOR?**

This tool takes a raw list of lapsed donors and automatically cleans up column names,
assigns standard site codes (e.g. CA-QVF), and combines it with additional data from a second file.
It eliminates manual copy-pasting so your file is immediately ready for database upload.

**2. HOW TO USE THIS TOOL (STEP-BY-STEP)**

• STEP 1: Upload Your Main Donor File
1. Click the 'Choose File' button under Step 1.
2. Find and select your main donor file (ending in .csv or .xlsx) on your computer, then click Open.
3. The tool will standardise column names (like renaming donor IDs to 'bbcrm-lookupid') and create site codes.

• STEP 2: Upload Your Mapping / Append File
1. Click the 'Choose File' button under Step 2.
2. Select your campaign matrix file.
3. The tool matches rows using site acronyms and attaches the necessary extra columns.

• STEP 3 (Optional): Rearrange Export Columns
1. Under Step 3, you will see blue tags representing every column header.
2. Click and hold down your mouse button over any column tag.
3. Drag it left or right to change its order, then release the mouse button.
4. Click 'Reset Default Order' if you want to restore the original order.

• STEP 4: Save Your Completed File
1. Click 'Save as CSV' or 'Save as Excel (.xlsx)' in Step 3.
2. Choose the folder on your computer where you want to save your file and click Save.

**3. TROUBLESHOOTING & LOGS**

• Grey text boxes display logs showing every action taken or if any rows failed to match.
• Click 'Download Prep Log' or 'Download Append Log' if you need a text copy of these notes.
